

Low Back Pain, Sciatica, Herniated Disc

Discover the lazy way to get rid of Low Back Pain, Sciatica and Herniated Disc. We received 157 phone calls from local residents asking about this treatment.

The treatment is done while the patient takes a nap.

Imagine feeling good. You have your freedom back. And all it took was an open mind to a new treatment. Simple, easy treatments done while you took a nap. NO surgery, NO medications and NO injections. Too good to be true? Maybe not.

But, I have to be honest with you. When I first heard about this treatment, I did not believe it either. After treating over 2,000 patients with back pain, sciatica, herniated disc and bulging disc, this new treatment sounded too good to be true.

I WAS CURIOUS.

So I did some research. Doctors from Mayo Clinic and Johns Hopkins University School of Medicine endorse this new treatment. I found research on this treatment published in two major medical journals – *Anesthesiology News* and *Pain Medicine News*. I called my colleagues. They all knew doctors who use this treatment who are helping a lot of patients.

When I called the manufacturer, they sent me a DVD. I watched a neurosurgeon and an orthopedic surgeon endorse the treatment. These surgeons even recommend that their patients get treated with this new treatment first before back surgery. There is an advisory board for the DRX 9000 consisting of big names like Dr. John Leslie, M.D. (Mayo Clinic), Dr. Joseph Pergolizzi, Jr., M.D. (Johns Hopkins University of Medicine), Dr. Alex Macario, M.D. (Stanford University) ... and other well-known and highly respected doctors and researchers.

I HAD TO SEE IT IN PERSON.

I booked a plane ticket to Florida and visited Axiom Worldwide - the manufacturer of this new treatment called the DRX 9000. I was in awe. The DRX 9000 is probably the most patient-oriented, technologically-advanced and most sophisticated non-surgical back pain treatment ever developed. I could not deny my patients the life changing benefits of the DRX 9000. Thanks to the DRX 9000, many of my patients have avoided back surgery. And avoided months of post-surgical rehab. Because this treatment is fairly new, many doctors are not very knowledgeable about the DRX 9000.

CARLA'S STORY.

(Name has been changed to protect privacy.)

Carla read about the new breakthrough treatment in the newspaper. She ordered the free DVD. Curious about the treatment, she called my office. Carla was tired of spending her golden years limited by her back pain and leg pain. She felt wounded...she moved cautiously. Her pain made her nervous, anxious and impatient. Carla was not sleeping well. She has not been as active...thus, she had gained 10 extra pounds. She felt like a little old lady with a knife in her back...and at times

a lightning bolt down her left leg. Carla felt sad about her pain and her situation. She missed playing with her 3 grandkids.

Carla decided to give the DRX 9000 a try. Six weeks later, her pain has dramatically improved. Her family and friends noticed the changes - especially the positive effect on her mood. Carla believes that she was meant to see that article in the paper. She had passed up on other "miracle treatments" before. She sure is glad she did not pass up on the DRX 9000.

THE DRX 9000 DECOMPRESSES A DISC.

Decompress is a fancy word for taking pressure off a disc. Too much pressure on your disc will result in a disc bulge or a herniated disc. This will result in back pain. Here's why. According to researchers, most back pain is caused by damage to the disc. You will also get sciatica if your herniated disc pinches your sciatic nerve. It will get very weak - maybe even die if the pressure on your sciatic nerve is not removed.

The DRX 9000 is designed to create a vacuum effect that will bring fluids and nutrients back in your disc. This helps repair injuries to your disc and promote healing of your disc. The end result is relief of back pain and relief of leg pain.

IS IT LIKE TRACTION?

It is similar to traction, but there are differences. The advanced technology of the DRX 9000 gives it the ability to focus the decompression force on a single disc. A precise force and a precise angle are used. With traction, the whole back is stretched. With the specificity of the DRX 9000 there is less potential injury to the area being treated.

Here are more advanced features. The DRX 9000 uses a sensitive computerized feedback mechanism. An advanced split-table design reduces friction between the patient and the device. A motor pulley delivers mechanized segmental distraction in a static or oscillatory fashion for a preselected duration. There are pre-set pull angle settings for each specific lumbar disc level. PLUS... many more new high-tech features.

TREATMENTS LAST 30 MINUTES.

You lie comfortably on your back while a screen shows relaxing nature scenes. You can listen to relaxing nature sounds via headphones. An adjustable air bladder under your back provides support and cushions your low back during treatment. You are even given a knee rest for increased comfort. Once you start treatment, the room lights are dimmed to minimize eye strain and enhance your relaxation. You can take a nap if you want to – most patients do.

**NO
PAIN**

YOU ARE IN CONTROL.

During your treatment, high tech sensors monitor and record the tension in your back muscles. If the sensors detect that your muscles are tensing up too much and fighting the treatment, things automatically go back to neutral. Your muscles are given a chance to relax. Then the treatment gradually starts again to decompress your disc.

If for any reason you want to stop the treatment, you can simply push a button located by your hand. When you push this button, the whole treatment stops immediately. Anytime you need help, you can push the service button that lets the staff and doctor know that you need immediate assistance.

DOES IT HURT?

Most patients say the treatments feel good and are very relaxing. They like that their back will not be cracked or twisted. And that nobody will cut them open. And that nobody will poke them with a needle.

If you still feel that this new treatment is too good to be true, I understand. Others have felt the same way when they first heard about it. They found that the DRX 9000 really helped them with their back pain after years of pain and suffering. So far, many patients are reporting fantastic results.

THE FLAW.

Unfortunately, the DRX 9000 does not help 100% of patients. Usually within the first week or two we will know if the treatments are helping you. How? If it is working for you, you will feel less pain. If it is not working for you, you will feel no difference in your pain level. For those who are helped, the results are close to miraculous.

Also, not everyone with back pain, sciatica, herniated disc or bulging disc qualifies for treatment on the DRX 9000. For example, if your condition has gotten worse to the point where you are having problem with bladder control or problem with bowel control, you no longer qualify for treatment on the DRX 9000. For your sake, I hope your condition has not gotten this bad.

THE COST.

Your out of pocket expense depends on the severity of your condition. Also, if you have health insurance, your insurance may pay for part of the cost of your treatment.

With your permission, may I make a recommendation?

What we usually do is schedule patients like you for a free consultation. During your consultation, we will determine what exactly is causing your pain. If your diagnosis is correct. If anything has been missed. If your condition still qualifies for treatment on the DRX 9000. And what other treatment options you should consider.

If you bring your insurance card, my staff will verify your coverage. Before you start treatment on the DRX 9000 or incur any charges, you will know your out of pocket expense. After

your consultation, you can schedule your first treatment or you can absorb the information you gathered and think things over before you commit to your first treatment... **YOUR CHOICE.** And if you start treatment and you are not happy with the result, you can stop any time.

If I was in your position, I would also want to check out the new treatment first and find out the cost first before I commit to any treatment. I am offering you a free consultation with no obligations for future treatment because this is how I would want to be treated if I was in your position. My staff and I do our best to live by the golden rule.

WILL IT WORK FOR YOU?

I hope so. What have you got to lose besides the time you spent consulting with me? What do you stand to gain if the DRX 9000 gets you better? What are you not able to do now that you would love to be able to do?

If you give me the opportunity to help you using the DRX 9000, I will do my best to get you better so that you can go back to doing the things you love to do with the people you love to do them with. My late grandfather, who was a minister, instilled in me the importance of helping others. This is my way of serving others.

How much longer will you put up with your pain? How much longer will your spouse and kids put up with your pain? How much longer will your boss put up with your pain?

After the media warned us of the dangers of long term use of common painkillers, how much longer will you *DEPEND* on those painkillers?

THE NEXT STEP.

If you want to see if the DRX 9000 is right for you, the next step is for you to pick up the phone and call my office at (831) 475-8600. My staff will schedule you for a free consultation with me right away.

If after your consultation I determine that the DRX 9000 is not right for your condition, I will let you know your next best option. After 10 years of working with over 2,000 patients with back pain, sciatica, herniated disc and bulging disc, I know that the stakes are high if your condition gets worse. Time is of the essence.

I hope you weigh the information you just read carefully. I also hope that you at least find out if this new treatment is right for you. A DVD on the DRX 9000 is posted at our website www.repairmyback.com.

Thank you for your time. Enjoy the rest of your day!
